

Designed for life

Quality and Care Guide

This quality and care guide is provided to keep your J Collection cabinetry looking like new.

Our J Collection cabinetry is manufactured with the highest quality materials. These finishes are very strong, durable and moisture-resistant, but can still be damaged by moisture if not cared for properly. Our 8-step polyurethane paint and wood product can last a lifetime with the help of these guidelines.

Immediately after the installation is completed you should vacuum the interior of the cabinets taking extra care with the drawer slides as dust particles can interfere with the smooth operation of your drawers.

Cleaning:

Any cleaning that may be required should be done using only a soft cloth lightly dampened with only water. For more difficult areas, a small amount of soap may be used, making sure to dry the cabinets quickly. Do not use any products that may contain silicone, solvents, harsh detergents or any abrasive products.

Spills:

When spills occur, they should be wiped up immediately before any liquid can penetrate the surface. Give special attention to the product around the sink and dishwasher. Do not hang any damp or wet dish towels over the cabinet doors.

Products to avoid:

- Products such as mineral spirits, nail-polish removers or paint thinners.
 - Ammonia or cleaning products that include ammonia.
 - Bleach or cleaning products that include bleach.
 - Never use wax or polish on your cabinetry.
- Do not use sponges or dishcloths as they could contain particles that might scratch your cabinets.
